

SET UP INSTRUCTIONS

When setting up your Jungle Hammock and Mosquito Netting upper keep in mind when attaching the guide lines to support the Mosquito Netting upper they should not be placed too far above the attachment point of the actual Hammock.

By setting it up this way it should allow the proper separation from the Mosquito Netting upper from the Hammocks main body when the user is inside and the Hammock main body lowers from the users weight.

WARNING

If you attach the guide lines attachment points too far apart from the attachment points of the Hammocks main body this could cause the attachment points for the guide lines to pull out from the Mosquito Netting upper when the user gets inside weighting down the Hammocks main body.
